syncing all in Outlook
Posted by AWSb - 2007/01/31 09:33

_____

I using Thunderbird for my Mails and Mailcontacts. Rainlendar as calendar (of course) and Outlook XP for my Contacts from my Cellphone. Now I would bring this together. Madly, I have to sync this all in Outlook.

The problem: In Outlook, I want to import the rainlendar .ics-file. After clicking on OK, it crashes without an error.

How can I deal it??

_____

Well, I cannot fix the Outlook's iCalendar support but if you attach an example file I can try to check if there is something that can be done in the Rainlendar's side to improve the compatibility.

_____

After among trouble with Outlook XP I bought a version of Office 2007 (with Outlook 2007). Now its all fine, but there is small problem further on. Outlook 2007 supports only Webdav for dataexchange, but I haven't implemented it on my Server. At the moment I use Rainlendar with ftp-connection for one calendar and one from Outlook 2007, but I can't sync it together. I hope the full sync support for Outlook will be implemented as soon as possible.

Attach you can find an example-file which is not supported from Outlook 2007.

_____

I upgraded from Outlook 2003 to 2007 and my calender entries in Outlook are no longer appearing in Rainlendar. Have I forgotten to do something?

_____

You'll probably need to recreate the Outlook calendar in Rainlendar.

_____

Is there any program that I could use to convert an ical file to an outlook acceptable file?
