
Text in wxTextCtrl is shifted

Posted by Fyr - 2014/01/08 06:51

It's not a bug, so I post it here.
Here is the screenshot of edit event window:

Looks normal, but if I place a vertical line and zoom a bit:

The text in the second wxTextCtrl is shifted to right. Is it a bug or feature?

Well, the text of course should align properly so it's a bug but I probably cannot do anything about it since the problem is either in the framework or in the operating system's controls.
