
Rainlendar crashes when login to gmail account

Posted by Spider - 2014/01/10 13:26

Hi! I'm using ubuntu 13.10 64bit and had just upgraded to rainlendar 2.12.b136-1.

When getting google tasks (gmail), rainlendar crashes after login at my gmail-account, just before I could click on the permit-button.

So I can't get the tasks into my calendar. If I would add google-calendars with google 3 version, the same crash would happen. So I used the old version for it.

Before I upgraded rainlendar, I had trouble with offline view. After starting system often no events were shown, although I had checked offline available.
