
sync events list to future months

Posted by rmb211 - 2014/01/11 14:06

Is there a way to sync the events list to future months? I would like the events list to show the scheduled events whenever I advance the current month to a future month. The way it is now, if I advance to February :(the events list still shows events for January. Thanks.

That's not possible. The list does not show all the events on the current month so linking its content to the month selection would be confusing.
