## time format code creates weird output

Posted by Ace\_NoOne - 2006/11/01 08:51

---

Hi,

I just changed the TimeFormat to "%H%Mh" in the advanced options, and for some reason this format code is automatically changed to "%H37Mh" - so the second percentage sign is replaced by "37" (kinda random, eh!?). If, however, I insert a space between the "H" and the second percentage sign, that format code is accepted - so I suppose there's some kinda parsing error.

37 is the ascii code for %. This seems to be a bug in the framework. I'll see if there is something I can do about it.

Oh right, that shoulda been an easy guess - but then again, I'm not an actual coding geek, just a wannabe... ;) Thanks for the info!
