
Backup file is not restored

Posted by recaspita - 2014/01/15 19:19

Hello, for several years I rainlander2 on my pc with excellent results. I come from the fact: after formatting the pc I installed again in my possession a copy of rainlander2 and to my surprise I could not upload the backup file previously exported and saved, or rather the message tells me that it was perfectly restored file however, nothing shows up in my calendar that I had saved. I would be grateful if someone puole suggest a possible solution. thanks to everyone for the hospitality. recaspi :(ta

If your file system has changed since the backup was taken (e.g. you have different version of Windows or use different user name) the restore might not work. In this case you can extract the Default.ics file which contains your events from the backup zip archive and import it back into your current Rainlendar installation in the manager (File->Import->iCalendar Format).

partially solved

Rainy Thanks for your prompt reply, I could not use the file Default.ics certainly damaged, but I recovered a previous backup and I partially recovered what interested me. recaspita
