
Rainlendar2 Arch Linux

Posted by gorki.b - 2014/01/26 06:51

Hi

Arch linux Kernel 3.12.9-1
Rainlendar Pro 2.12 (b136) 64 bit

After the latest updates in arch linux rainlendar pro stops working.
Missing lib`s during start.

Any idea ?

Thanks

Which lib?

Re:Rainlendar2 Arch Linux

rainlendar: error while loading shared libraries: librtmp.so.0: cannot open shared object file: No such file or directory.

On my system i`ve got librtmp.so.1 and a symlink librtmp.so.

libgcrypt.so.11.7.0

libgnutls.so.26.21.8

libtasn1.so.3.1.12

libgcrypt.so.11.7.0

the same.

Could copy this lib`s from an "oldedr system" and softlink them.

Then rainlendar starts.

You probably have to do that in the future too if you are using something else than Ubuntu. The library incompatibilities could be solved by statically linking everything but that's not practical.

Ok thank you.
Will do that.
