
Rainlendar kills dates!

Posted by nickname - 2014/02/21 08:16

Since I use rainlendar in combination with google calendars, because I want it on the Smartphone too. It happens sometimes that I set a date on the laptop in rainlendar 2-3 seconds later the date was killed!
Till know it was still there after a 2. entry. but today I cant set a termin! 5 times he killed it again and again wtf...? I use 2.11.1 pro....

You should upgrade to the latest version and see if the problem still happens with it.
