## Can't add Google calendar

Posted by Buzzdee - 2014/03/13 09:38

---

Hi,

I've installed Rainlendar on a new PC. After adding the License and editing the Proxy I try to add my Google calendar (Version 3).

After inserting my name and password and my Google authentication code an empty window appears, I can't select my calendars ...

The Google Calendar (v3) uses an embedded Internet Explorer (on Windows) for the authentication with Google's server. Verify that you can connect to accounts.google.com with IE and that you have not changed the Internet Settings for the Google's domain.
