
Where to download latest Beta?

Posted by keithy397 - 2014/03/16 05:03

Hi,

I'm a bit confused over the Beta versions. I thought they were Beta's of the Pro version of Rainlendar but when I follow the link to B138 it takes me to a choice of Lite or Pro. What's the story now? Are the Beta's these days the Lite option or should I download the Pro option?

Thanks,
Confused!!!

The latest version of Rainlendar at the moment is the official 2.12.2 build. There are no newer beta versions available.

I'm running 2.12 (b135). Is that the latest Rainy?

"The latest version of Rainlendar at the moment is the official 2.12.2 build. There are no newer beta versions available."

So download the current Pro version.
