
How to change the font in todo and events windows?

Posted by huaxuejia - 2007/02/02 01:38

at my title.

I use the default template - shadow4, it is fine, but I dislike the font - arial, I prefer tohoma.

my question is: in the todo and events windows, how to change the font to tahome size 8?

Thank you for your reply, :)

Btw: If it is convenient, could you also forward your replay to my email: zxa1911@gmail.com?

Thanks again!

Thank you!

I have read that post, but as you know, the default template file(shadow4) is one integrated file, where to find the .xml file?

and I search in rainlendar install folder, there is not any .xml file, just so many .ini file.

If I need some special tools to open the template file?

Thanks again and waiting for your reply.

The skin-file is actually a zip-file. Just rename the file "Shadow4.r2skin" to "Shadow4.r2skin.zip" and unpack it into a temp-dir. There you can found the right xml-file, edit it as mentioned in the post I linked to and after that repack all the files (incl. subdirs) into the zip-file again. Rename the zip-file to its original name and copy it into the Rainlendar skin-dir. Make a backup of your original skin-file first!

Alf, thank you very much!

I have do like what you said and solve this question well. To me, the appearence looks more clear after using tahome size 8.

Thanks again!
