
Skins created by artists are all in ZIP file

Posted by Samsi - 2014/03/21 05:07

All latest featured Skins are in ZIP files.
How do install these in Rainlendar2? Nobody adds an explanation.
Thanks for help.

If the zip file contains a *.r2skin file you can extract that from the archive and drop over Rainlendar's window to install it. If the zip contains *.ini files and images it is an old format skin which you need to manually extract it to a subfolder in Rainlendar's skins folder.

:cheer: Thanks, Rainy,
Proceeded like you explained and all Skins are there!
