## Need help in TO DO management

Posted by leffect - 2014/03/31 02:46

---

Hi,  
i have a quastion.

I want to create TO DO task witch repeats itself everyday on 08:00am till 2015. The problem is that when the alarm goes on I dismiss it and press the small circle in TO DO list to confirm that the action is done, but what happens is that it will not go away it jums to the next day. Is there any solution?

Add a start time for the task and enable "Hide upcoming tasks" from the context menu. That makes the task to appear only after the start time has passed.

Hi again,

i want to see the task on the list and when the alarm comes I want to dismiss and press that small white circle so that the task disappears and comes again on the next day.

By the way if I want my task to repeat itself forever do I need to set dua time, or i just need to put it on everiday reminder (forever) in Reccurence option? I hope you understand what I mean :)

Thank you alot

It's not possible to define a recurrence for a task without a due date.
