## Different colour for different calendars on Rclick

Posted by cormie - 2014/03/31 19:07

---

Just updated to the latest version today and I'm just wondering, is it possible at all to have any way to tell which calendar each event is from, without having to click into it first?

I share most events I make between 2 calendars and it's fine when creating the event, I just have both calendars selected and it creates the event in both, but if I ever need to edit the event, I need to right click the date and I get a list of the events for that date, the same event on the two separate calendars looks identical and there's nothing to differentiate them in the list so it's just a matter of luck that you click into the right one you want to edit and something I think the order of them even changes, so you could be looking to edit the one from calendar A, click into one, and realise it's calendar B, then you have to close that, right click again and try again until you click the right one.

If there's a way to differentiate events from each calendar, please share :)

The context menu does not show the calendar so if the summary in the events is the same it's not possible to know which is which. You can enable the Options->Advanced->"Show event calendar" setting which adds the calendar's name to the event list. You can also see the calendar in the Manager window.

Thanks again for the reply. I've enabled "show event calendar" and after quickly checking, it might be an acceptable solution, as long as the view is ordered the same as the context menu and clicking into the relevant numbered list item will result in the previewed event opening :) I think it'll be fine, thanks!
