## Google To Do list not displaying in Rainlendar

Posted by BlackCat - 2014/04/01 03:54

---

Not sure if this is a settings issue or a bug...

To do Lists from Google.

I am using a to do list in Google, I have added this to my list of calendars.

The list has some entries on it at the moment which are not appearing in Rainlendar. I have added new tasks in Google which are not displayed in Rainlendar.

I have added tasks in Rainlendar which subsequently appear in Google but are not displayed in Rainlendar - which indicates that the two are linked.

Do you see the tasks in the Rainlendar's Manager window? If you do then check from the to do window's settings (Windows->Settings->Todo List) that there are no filters enabled for the window.

OK, thanks for that, now fixed it, was to do with calendar selection and included categories.

Thanks for the tips though, it pushed me in the right direction.
