## random colours for all events in the events list

Posted by arnie2014 - 2014/04/02 19:16

---

Hi all I hope somebody can help me

Today I downloaded rainlendar calendar programme onto my pc and I must say it is probably the best calendar programme I have ever used. as iv been looking for a solution to keep all my work dates in one place and be able to sync it with my mobile.

Now my only problem is and iv searched online and cannot find the solution so that's why Im here is that im looking for a way in the events list itself it looks like for each category such as ( work) I can only see it for one colour, so every work event that appears in the event list is all in one colour so if I have multiple of that same category it will all be the same.

now im looking for a way for the event list to allow me to display every event in a random colour to make it easier to separate and see

is there a way I can do this with your software?

thank you

Go to advanced tab -> Allow select multiple categories

Then you can select 2 categories for an event, work and some color category like pink.
