## QuickAdd & incorrect time

Posted by codesoho - 2014/04/06 09:25

---

When I try to enter a new event (i.e. 16:00 Test) through QuickAdd that same event is registered at 18:00 in my Events window. It shows 16:00 for a second and then refreshes to 18:00.

I use a single Google Calendar for all my events and the timezone is set to GMT+01:00 directly on the webapp itself.

If I do it "manually" through the add new event window the time is registered correctly. No problems with the timing when adding events on my Nokia N9 on that same Google calendar.

Rainlendar v2.12.2 (b138) Windows XP 64bit
