---

I have read the directions, but i don't get. How do you install skins?

Thanks Chely

What skin are you trying to install? If the skin is in a zip archive you just unzip it to the Rainlendar's skins folder. Usually the reason why a skin doesn't work is that an extra subfolder is created when the skin is unzipped so make sure that this doesn't happen.

Ok i did that right maybe where I put is wrong. When I unzip it i put it in C:\program files\rainlendar2\skins. Is that right.

Thanks for your help

Have you tried any other skins? Perhaps the one you are trying to install doesn't work in Rainlendar2.
