Rainlendar 2.13 BETA build 139

Posted by Rainy - 2014/04/28 08:05

————————————————————

Build 139 can be downloaded from here:

Windows (32-bit): Rainlendar-2.13.b139-32bit.zip
Windows (64-bit): Rainlendar-2.13.b139-64bit.zip
Linux TAR (32-bit): Rainlendar-2.13.b139-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.13.b139-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.13.b139-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.13.b139-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.13.b139.dmg

MD5SUMS-b139

Translation file: rainlendar2.pot
Shadow4 skin addon: Shadow4-Widgets.r2skin-addon

This is beta version! It has not been tested.

Install instructions for Windows:
1. Make a backup (File->Backup in Rainlendar's manager dialog)
2. Download the zip file from above
3. Uncompress the contents of the zip over your current Rainlendar installation (C:\Program Files\Rainlendar2)
4. Run Rainlendar2.exe

Changes:
o Fixes to the free day calendar layout.
o The manager could show current dates for recurring events before the actual start date.
o In advanced skin options it's now possible to move only the default windows to the active list.
o Changed the network and traytip delays to seconds in the settings.
o Failure to read events from Outlook did not always show an error message.
o Changed the way advanced options are handled so that translations won't affect incorrect setting.
o Added "None"-method for Google alarms which disables the default Google Calendar alarms.
o Dragging tasks under different sections in the to do list did not update the item.
o Added option to show the empty days in the event list.
o The default alarm for Outlook events did not dismiss unless the calendar was refreshed.
o It's not possible to use ';'-character in the calendar name since it is a separator when multiple calendars are used.
o The characters on event description were converted to utf-8 in Outlook events.
o Skin windows can be resized with the mouse.
o The EXDATE for events with time is stored as DATE-TIME instead just as DATE.
o Image scaling uses now nearest neighbour algorithm which doesn't give as good results but is much faster. Use Options->Advanced->"Scaling quality" to change the quality.
o Fixed a crash bug in CalDAV when events were using time zones.

————————————————————

The 64 bit version had incorrect runtime libraries. I updated the build so let me know if it still refuses to run.

==

Re:Rainlendar 2.13 BETA build 139

_____

x64 version crashes on start.

==

Re:Rainlendar 2.13 BETA build 139

_____

Not yet been fixed.

Recurrence problem while arranging task
http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=20557#20562

False trigger alarm? (The other issue I posted)
http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=20979&limit=6&limitsta
rt=6#21073
All setting:
set Options--Calendars--'Default alarm (minutes)' as "0"
Summary: test The last weekday event/task
Start/End time: 2014/1/31(yyyy/m/d), All day event
Alarm: 7 Days before the event starts.
Recurrence: Repeat every 3 Months, On the last Friday of the month

Add:
Found new function Rainlendar_SetWindowSize(), but can not see it's introduction from Help -> API Reference

==

Re:Rainlendar 2.13 BETA build 139

_____

Formerly if you used the sidebar, the tasks and events parts were resized according to the number of tasks/events visible.
This has changed so e.g. it shows a fully blown up tasks schedule with no tasks in there. Instead the calender(month
view) is smaller.

I liked it better the way it was. Is this intended or could you change that?

Updated build works perfectly now.
Thank you so very much for such a quick fix!

_____

@anoob, I thought I fixed the first issue but I guess I didn't. I'll add it again to my backlog. The
Rainlendar_SetWindowSize() is in the index but the content is missing. Weird. I'll see what's wrong with it.

@Flamefire, the problem with the old sidebar was that it could grow outside the screen if there were a lot of entries. You
can now resize the window to fit in your screen. If you prefer to have small lists you can use the separate calendar, event
and to do windows. Or keep using the sidebar from the old version of the Shadow4 skin.

_____

So why can't you fix the problem that it could grow to much instead? It looks really strange...

_____

Traditional_Chinese has uploaded.
The localization file does not place on beta section.
Lost strings: Day View, Moonphase, in skin select window, maybe can add in next build.
Thanks.

_____

The localization file does not place on beta section.
Lost strings: Day View, Moonphase, in skin select window, maybe can add in next build.
The beta translations should go to separate list again.
"Day View" was removed by accident. "Moonphase" should be "Moon Phase". I'll fix those.

Re:Rainlendar 2.13 BETA build 139

_____

When I launch the beta, from time to time, I have this error.
What can I do to find how to repair this.

_____

The assert is probably caused by an invalid time in one of the events (or alarms). It's usually nothing to worry about if
everything seems to be working fine. If you can find out what event is causing the problem I can try to check if it's a real
problem or just some side-effect in the date calculations.

==

Re:Rainlendar 2.13 BETA build 139
Posted by ozzii - 2014/05/04 03:37
_____

So nothing like a trace log (for example) for finding this error.
I have a lot of events, so finding the error will be tricky

While I'm here, where I need to post the beta translation.
I've posted here but it seems that it's not the right place :blush:

==

Re:Rainlendar 2.13 BETA build 139
Posted by Rainy - 2014/05/04 03:40
_____

Hmm... I wonder if it would be possible to show the full callstack in the asserts. That would make it easier to locate the
problem. I'll need to check that.

Re:Rainlendar 2.13 BETA build 139
Posted by Rainy - 2014/05/04 03:47
_____

The beta translations can be uploaded to the language page like with the official version. They go to a separate section
at the bottom of the language's page so the files don't get mixed. I'll update the latest versions from the page when the
next version of Rainlendar is released.

_____

It lools like there is a problem with the digital clock of the shadow4 skin. The clock didn't update itself the time. A refresh
of rainlendar is necessary to show the current time in the clock and then it stays at this time until the next refresh.

In 2.12.2, the clock did work.

_____

There's a bug related how the window gets updated. It might affect also the drawing order (items could be drawn below others). I'll fix it in the next build.

ERROR: Number stack has 0 elements after evaluation. Should be 1.
I found my error y="r" instead of y="0r" ;)

Warning: iCCP: cHRM chunk does not match sRGB
Warning: iCCP: known incorrect sRGB profile
Two warning appeared with build 139
default skin or not!

===

_____

The warnings probably come from the png library. The could be caused by some image file which has incorrect color information (or something...).
