
Colour assigment not saved for google calendar

Posted by Dasun - 2014/04/30 13:14

Hey guys,

I have the following problem with the last stable and the current beta version of rainlendar (64 bit):

The colour assigment for the colour turquoise in the calendar options didn't save. I can choose a colour but aber I clicked at ok th leave the option windows, the calendar reloads and I am opening the options again, its empty.

I bought rainlendar about 3 weeks ago, so I can't answer the question, if this problems exists some versions before.

That's a bug. It will be fixed in the next build.
