
cannot create account; \"Preference\" dialog does no

Posted by gkai - 2014/05/02 15:41

Hi,

I was almost finished adding my first account in Rainleander when it crashed.

Since then I can start the program but the only program menu item "Preferences" (besides Service, Hide and Quit) will not display a dialog any more when I click it. All I can do is actually to Quit. Re-downloaded it but same behavior.

Any ideas? I am on OS-X 10.6.8. Thank you!

There is probably something wrong in the settings. You can reset Rainlendar's settings if you hold cmd+shift keys down when the application starts.
