
Auto-refresh

Posted by civico28 - 2014/05/03 04:39

Just upgraded to Pro as I wanted to sync my Google Cal. What I would love is to introduce this to my school as a base for our electronic calender (that is non-existent at present)

However I've come across a problem in Rainlendar doesn't seem to auto refresh at all... This would be a major floor to my plan as many staff would not update and then they would miss events.

Wondering if I've missed someway to make this happen. I thought there would be an auto update every (enter time) option but I can't see one.

Any help would be appreciate even just a, 'this isn't an option' so I can stop search for it.

Thanks!

You can use the "Poll frequency" setting to make Rainlendar to check for new/modified events periodically.

Two google online calendars. I can for the love of god don't understand where this "poll frequency" function is. My main problem is that when I add an entry in my iPhone calendar it doesn't show up in Rainlendar but it will show up in Google (online) calendar. What shall I do to get the entry from my iPhone to Rainlendar? I'm at loss here.

iPhone --> Google online Calendar xx> Rainlendar Pro

Please help me understand.

The poll frequency setting can be found from Options->Calendars.

Ah, I see. Thank you. I am running 2.12 and I couldn't find it there. Thanks again.
