You did not include the menu area at all in your screenshot. What's in there?

Where I should find it? Where is menu item for importing events? By I should see File->Import menu item at this "Manager" window, but no menu 'File' there are as you can see on my picture.

I remember this is a bit old issue, happened on version 2.8, you need to upgrade your Rainlendar2 :

At the moment, the latest version is 2.12.2, you can download it from :
