per window visibility setting on all desktops

Posted by Magalaan - 2014/06/19 20:29

_____

I can now make all windows visible on one desktop or on all desktops. But I do not want all windows visible on all desktops. I only want the clock visible on all desktops.

If it is not too difficult to realize I like a per window setting

The setting currently affects all windows but I'm not sure why it was created like that. I'll check if it would be possible to change it to pre-window setting.

Thanks! I read in the changes list the possibility is added in 2.13 build 140 bèta :-)

Can you tell me what line I have to have to add to the connfig file to make only the clock visible on all windows?

The ShowInAllDesktops setting must be set to 1 in the configuration file for the window. You might need to add the setting to the correct location if it's not there yet. Here's info how to set the per window settings: http://wiki.rainlendar.info/index.php?title=Per-window_settings

_____

Yes it works (ubuntu64 pro-version)
Thanks! :-)
