[SOLVED] Rainlendar PRO + Posteo.de

Posted by Kermit - 2014/07/06 05:14

───────────────────────────────

Hello all,

I am not able to get Rainlendar running with my calendar from Posteo.de

They provide some tutorials, but nothing worked out for me. (posteo.de/hilfe?lang=de&tag=kalender)

Do you have any suggestions?

The test-account on posteo is free, if you want to do own tests.

Thanks and regards,
Kermit

UPDATE:

It works now. Had the error cause the calendar was empty. After I created an event from the webinterface Rainlendar was able to open the calendar.
