
Alarm icon in event list

Posted by qiang - 2007/02/10 08:55

How do I enable the alarm icon in the event list like the old version so that i can differentiate those events that have alarms and those that do not have?

I don't think there has ever been such feature in Rainlendar. You could use a different category for the events that have alarm so that they have a different appearance in the list.
