
Calendar layout options

Posted by mountiealpha - 2007/02/10 22:07

I found the layout (i.e. type-z, etc.) options available in v0.22 very useful.

I was unable to find anything on the forums or in the help that would allow me to do something similar. What I'm looking looking to do is to have one month in the past, the present month and the next two months to display simultaneously.

The FAQ explains how to show multiple calendars on the desktop at the same time.
