## All elements move ~40 px up

Posted by AoOs - 2007/02/11 11:05

---

Hi, everytime the rainlendar system refreshes, like after I've entered a new event, alle windows move 40 px or so, up..

This is really a bore, since I have to drag them down to their original positions several times a day.

A bug, or a mistake from my side?

Do you have a multiple monitors? Where are the windows located? If you move e.g. the events window to some other location does it still behave like that?

Nice one Rainy :)

I do have dual monitors...

And since I updated the positions of them, which btw now is screwed, the problem came.. (my second monitor is located at -1280, -96 )

I'll write Nvidia and return to you :) thnx for answering
