
Time Zone Problem

Posted by Grafula - 2007/02/12 05:34

I use Rainlendar version 2 (b25) build Oct 28 2006.

I often travel between time zones.

When I add new events I always put times in at the local time zone. (like airplane departure times etc.)

Now, when I adjust my computers timezone Rainlander also "adjusts" the times of events, thus making me late for planes...

Is this a bug or is there a setting that I don't know of?

Thanks

The times are stored as UTC so if you change the timezone they get adjusted too. Currently it is not possible to define events that would use some specific timezone.
