
Rainlendar blanks out

Posted by madymo3d - 2007/02/12 16:30

This didn't used to happen, but now whenever a window overlaps Rainlendar, it blanks out to solid color. My background is blue, and it blanks out to a darker blue. Returns to normal as soon as the window is moved. Was running 0.22.1, just tried ver2 and still the same problem unless I set it to OnDesktop. To Do and Events have the same problem and each portion blanks out independently of others.

Running XP Professional SP2 on Dell Latitude D600 laptop.

Thanks.

Can you attach a screenshot?

<http://www.wideopenwest.com/~hsiacc/rainlendar.jpg>
The blued out spots are Events and To Do for 0.22.1
<http://www.wideopenwest.com/~hsiacc/rainlendar2.jpg>
The blued out spots here are the calendar and Events for ver2.

Weird problem. If you disable the native transparency (Options->Advanced->Transparency) does it fix the problem?

Re:Rainlendar blanks out

Did a few experiments. Setting the transparency to Copy and Region got rid of the problem. I noticed one of my Yahoo Widgets was showing the same behavior, so I tweaked its transparency level. Transparency less than 100% will show the blacked out behavior. Same for Rainlendar set to Native mode->On Desktop/Normal/On Bottom. So it appears to be a transparency issue.

You could try to upgrade your graphics card drivers and see if that helps.
