## Can't uninstall old version

Posted by Lazuli - 2007/02/20 16:28

---

OS: Windows XP Home

I just upgraded to Rainlendar 2 and all my events transferred safely. However, now I can't remove the old version (0.21)

I tried removing from "Add or Remove Programs" but it says it's already uninstalled. I also tried "Remove Rainlendar" from the Rainlendar folder in my Start menu and it says that uninst.exe is missing.

Help?

You can always try re-installing the old version so that you can uninstall it. :P
