
How to put event and todo list in same window?

Posted by PDPD - 2007/02/21 12:30

Hello,

I would like to put todo items in the same window as event list under the same day format. For example, if I have a meeting on Mon (event item) and driving licence renewal due on Mon (todo item), I can show both items under Monday in the same window such that I don't need to check both windows. Can I do that? Thank you.

It's not possible to put the tasks and the events into the same list.

You could always just list ToDo's as Events and delete them when you're finished.
