
What is the network calendar update priority?

Posted by AncientPC - 2007/02/26 23:40

Is network calendar priority based upon calendar size or does Rainlendar automatically update when it starts?

Often times I'll complete / tasks a lot of my laptop, come home and turn on my desktop, and then my desktop will overwrite the remote calendar (which is then propagated over to my laptop).

Edit: I guess it's based on size. I just deleted a bunch of events and to do items off my desktop calendar and they keep reappearing since my laptop is on as well. :(

Each item has a last modified time stamp which is used to define the newer item. However I just noticed that the timestamp is not updated correctly unless you make the modifications in the event/todo dialog. I'll fix that.

Also, if you have the offline file enabled the deletion does not work correctly at the moment. There will be a fix for it in the next build.
