
Rainlendar 2.1.33 Outlook2000 import ok, but unreg

Posted by Darth - 2007/02/27 07:06

hallo,

this Beta Version imports all of Events that i have in Outlook 2000 (The Version 2.0.2 does this NOT).

My Problem is know, that i´ve copied the license.r2lic file into c:\Programme\Rainlendar2 but he still give me the Information "Unregistered".

Is it possible, for this Version to get a license.r2lic File - because i need this import very urgent and that helps me a lot!!!!

I hope, i get a good quick answer from you ;)

The existing license files should work also with the beta versions. Just drop the file over one of the Rainlendar's windows and if should be copied to the correct place. If you cannot get it to work contact me via email.
