
Two Calendars for two different tasks?

Posted by EnchoO - 2007/02/28 07:35

If I want to create a Calendar, ToDo list and Events list to record work tasks,

and a separate one to record say life social/life events,

Is it possible to have two separate records displayed on the desktop rather than two records meshed into one Calendar, ToDo and Events display?

Thanks

Jack

I played around and I added another calendar file to switch between 2 calendars.

It meets my needs quite well.

Is it possible to display the 2 separate calendars at 2 different places, rather than switching 2 calendars in the same place?

Thanks

You can do that with the build 33 (available in the beta forum). Just add a second calendar window in the advanced skin options and set filters for both windows which display only the given calendar file.
