
Update Network Calendar

Posted by Henke - 2007/03/01 19:42

Hey!

I'm having this problem. I've set up the WebDAV (I think) I get a 403 page when trying to browse to the calendar catalogue which I say was right.

And it seems like the calendar gets updated from my server. The thing is this, the server calendar doesn't get updated :(

I've set the chowns to apache:apache, tried chmod 777.

What else has to be done??

Regards Henke :cheer:

Are you able to upload files with curl to the webdav server?

curl.exe -T file.txt http://server/path/to/davhome/
