## Rainlendar2 Eventlist Scrollbar

Posted by dsylecxia - 2007/03/02 19:01

---

Hello, I hope this post isn't redundant. I've looked around a bit and I can't find any threads that answer my question. If any exist, please link me to them so I can delete this post.

How does one go about making scrollbars in the eventlist for Rainlendar2? I'm a bit new to Rainlendar2 so I don't know how to use it very well yet. In previous versions, overflowing events on the eventlist would simply get cut off after a certain horizontal line. However, this does not seem to apply in 2; the event text on my skin overflows and vertically offsets my calendar, which is docked on the bottom side of the eventlist.

Here is a screenshot of my theme:

<http://img171.imageshack.us/img171/8738/rainlendarvw5.th.png>

Here is the content of the .ini file (it's from a previous version of Rainlendar, hence the extension):

```
BackgroundBitmapName=Calendar-bg-English 3.png
BackgroundMode=0
BackgroundBevel=1
BackgroundSolidColor=8080
```

```
DaysEnable=1

If you can tell me simply how to how to cutoff the eventlist text so that it wouldn't offset/overlap the calendar, I would also appreciate it. However, what I'd really like to know is how to make a scrollbar, as it is now possible to employ them, and I've always thought a scrollbar would really complete this theme. Again, if there are existent threads on this subject, please redirect me so I don't waste this forum's space.

Thanks for your patience and support.  
--Matt

The old Rainlendar skins (i.e. the ones that use ini-files) cannot have scrollbars. You would have to convert the skin to the new xml format.

Ah, okay. I think I've got it all figured out. This thread helped a whole lot. Thanks Rainy.
