## Outlook not available as calendar type

Posted by viperdrv - 2007/03/07 14:24

---

Hi,

I've been using Rainlendar for a while now - great program!  
But, after upgrading to the latest version I cannot select "Outlook" from the calendar type drop-down.  
I have tried using IMO and network settings for Outlook but it makes no difference - this was not an issue with the previous version of Rainlendar I was using (1.6?), which could sync with Outlook calendars in IMO. I have tried uninstalling and re-installing several times (including folder deletion and registry clean out after uninstalls) but to no avail.  
I hope you can help me!

You need the Rainlendar Pro version for the Outlook support.

Thanks for the prompt reply!

Ok, I'll give it a go
