## Problem: Distorted Graphics

Posted by nlink - 2007/03/07 14:47

---

Hi, I was wondering if anyone could help me out with this problem.

I have always Rainlendar running on my desktop. However, when I open up other windows, such as Firefox, Internet Explorer, or Microsoft Word, there is a blank distorted rectangle where the Rainlendar To Do List used to be. Then, when I minimize the window, the To Do List retains part of the previous window in its background. This also happens when I switch from one window to another, or when I am scrolling. The rectangle where the To Do List is is always distorted.

My video card is of good quality, and I have already tried adjusting the Position and the Transparency options of Rainlendar. So far, nothing has worked. Any help regarding this problem would be greatly appreciated. Thanks!

Can you post a screenshot? If the issue is related to the native transparency you could try to update your display drivers to see if that helps.
