## Format of the Text String in Eventlist

Posted by bilbo\_b - 2007/03/08 13:44

---

Hello...

Is it possible to change the text string for the days in the eventlist ? i found it better in the old rainlendar 0.22, so that i have the resulting strings like this:

Today  
Tomorrow  
Saturday, 10.03.07  
Sunday, 11.03.07  
Monday, 12.03.07

the actual (standard) situation is like this:

Today  
Tomorrow  
Saturday  
Sunday  
Next Week, Monday  
Next Week, Tuesday and so on...

i found the first solution better, how can i set this to the first format ?
