
Old version (0.22.1) for Linux?

Posted by Tochjo - 2007/03/10 09:07

Hello there,

I was wondering if it is still possible to download older versions of Rainlendar, especially for Linux. For some reason I simply prefer the old version :)

If it's not, no problem, I'll simply use the 2.0.2 version.

Thanks in advance!

The 0.22.1 is a Windows application. There is no Linux version of it.

Ah, no wonder I couldn't find any reference to it on Google :lol:

I recently got access to a Linux computer, so I assumed the Windows version number would be the same as the Linux version number. Because I had got used to the Windows version at home, I thought it would be the easiest if I could get the same version for Linux, however, I'll simply use the new release then.

Thanks for your answer :)
