
Server Plugin

Posted by dadarara - 2006/11/01 17:53

I am ussing the 0.22 version with the server setup.
I have 5 computers!!

It works very nice thank you!

How about this server capability to work in the v2 ?

Network updating is fully supported in V2, however two way updating is limited to the Rainy Server / WebDev and Ical Exchange (at present).

Note any Network updating I believe you need a PRO version

I don't think this will work.

Read:

http://www.rainlendar.net/cms/index.php?option=com_joomlaboard&Itemid=27&func=view&id=101&catid=3

I want the same than you :D

regards,
Marc

so what is the verdict?!
Is there a server option or not?
:blink: :(:huh:

The server now works via WebDAV instead of a it's own server app. Which should be an improvement as the lack of a GUI front end for the server, is a pain in the ass.
However I can't seam to get any help getting it to work :(.
