## .ics problem

Posted by tomfun - 2007/03/16 09:46

---

Hi everybody,

I had a problem with the .ics file.

I did a manual modification into the ".rainlendar2/default.ics" file. I delete an event by deleting the line between "BEGIN:VEVENT" and "END:VEVENT

". But since this modification, when I import this calendar by "Icalendar format", I have a message : "0 events imported with succes".

I 'm so affraid because my last save has 2 months !

Please help, I would like to know why I had this problem.

Thanks.

Thomas.

PS : sorry if my english is not perfect, I'm french.

You probably accidentally changed the format of the file. The ics-files must be in utf-8 format. Try using some text editor (e.g. PSPad) which supports utf-8 to convert the file back to that format and try to import it again.
