Rainlendar 2.1 build 35

Posted by Rainy - 2007/03/18 10:14

_____

Build 35 can be downloaded from here:
Windows: Rainlendar-2.1.b35.zip
Linux: Rainlendar-2.1.b35.tar.bz2

This is beta version! It has not been tested.

 - 18 Mar 2007
o Status and due date were missing in Outlook's tasks. Fixed.
o Changed the snooze and dismiss buttons to icons so that it's not necessary to translate them.
o Added title to all windows.
o Images and buttons can have tooltips.
o EventListHeaderSeparation was handled incorrectly in the old ini-files. Fixed.
o Offline files for network calendars got broken in b34. Fixed.
o The backup path can be changed with a command line argument.
o Reading categories from the skin is now optional (Options->Advanced->Show categories from the skin)
o Fixed scrollbar positioning when items are removed from the lists.
o New option: Options->Advanced->Keep alarm always on top
o Tooltip show delay is now configurable (Options->Advanced->Tooltip show delay).
o Added support for single and right click actions to the tray icon. Note that right clicks will disable the context menu.
o The traytip is shown always inside the screen area.
o Fixed window positioning problem with negative coordinates and the On Desktop feature enabled.

_____

Looking much better! Thanks for fixing the task list!

One smaller Outlook bug - I had an event that occurred every Wednesday at 6:00pm. I ended up deleting two of those events, but leaving the repeat settings the same. While outlook did remove the event from those two particular Wednesday's, Rainlendar didn't.

I don't know if that's one that can be fixed or not, but it would be nice. Let me know if you want a copy of the event.

-Kevin

Nope.
All windows disapearing when I try to drag them.

_____

Kevin8020: Rainlendar should support the exception days so please attach the Outlook's event and I'll take a look at it.

Erelen: You need to change the transparency from native to copy or region.

In "region" mode shadow is too ugly, in both ("region" and "copy") I can't change transparency - so, it is not a solution.
Also, (!) in "On Desctop" mode breacks windows snapping (windows snap to screen borders, but not one to each other).

I can check if there is something that can be done about the snapping problem but the issue with the native transparency and on desktop setting most likely won't be fixed. It's a minor issue (you can get the windows back by refreshing Rainlendar) and a fix would complicate the code considerably.

Thanks. The exceptions are set on incorrect days. I'll fix that.
