## Substitute \'Today\' and \'Tomorrow\' in Evenlist

Posted by JMPc8m5v - 2006/11/02 05:25

---

i liked that function to substitute 'today' and 'tomorrow' in the eventlist window, and it shouldn't be too difficult i guess. this could probably be changed manually when the skin editing guide comes out

Options > Advanced > EventListHeaderFormat

HTH.

sorry i meant in addition to the eventlistheaderformat.  
i use 'In %D Days', which gives me 'In 0 days', 'In 1 days,' etc.  
before it would show 'today' and 'tomorrow' for the first 2 entries.  
just a matter of being used to another way, but it shouldn't be hard to fix should it?

i know nothing about programming so this may sound stupid, but would it accept some sort of 'if' function?  
something like 'if %=0 <Today>, if %=1 <Tomorrow> In %D Days'

Oh, well, Great Rainy Himself will have to answer this then...

Nope, it's not possible to use functions in the settings. I could perhaps add new header formats for the first two days and for the first week so you could customize them better.

well if you find yourself with nothing to do one day after fixing all the other items on your to-do list, then there is one person, at least, who will appreciate that change :)
