
Rainlendar 2.1 build 36

Posted by Rainy - 2007/04/01 08:32

Build 36 can be downloaded from here:

Windows: Rainlendar-2.1.b36.zip

Linux: Rainlendar-2.1.b36.tar.bz2

This is beta version! It has not been tested.

- 01 Apr 2007

- o Network shared calendar didn't work with ftp server if the file was in a subfolder. Fixed.
- o Exceptions were sometimes set on incorrect day for Outlook events. Fixed.
- o Some changes to the way tray tip and tool tips work together.
- o Fixed window snapping in On Desktop mode.
- o Refresh doesn't reset the snooze times anymore.
- o The list of times in the event and todo dialogs were incorrect on DST change. Fixed.
- o Removed the error message when the log file cannot be created.
- o Event appearance works now also with localized category strings.
- o The start date is shown now correctly for recurring tasks.
- o Todo list shows tasks always no matter what the start date is.
- o Setting a recurring task completed will just move the due date to the next occurrence.
- o Adding items to online calendar could create a never ending update loop. Fixed.

Hello,

o Todo list shows tasks always no matter what the start date is.

Is this the new default, or was this supposed to be fixed? I am using Outlook 2007 on Vista and have a Todo item that's not scheduled to start until October 1st yet it already shows on my Todo list. Also the date on the Todo list is September 30th :blink:

Thanks for fixing the recurring tasks and update loop! :)

Edit: In regards to recurring tasks, is it possible to keep recurring tasks hidden until the start time?

I agree with the above posts, the start time feature was nice. Could you possibly make that an option?

(Scratch that Re-occurrence bug... turned out to be a bug with the outlook upgrade I had just made.)

The start time for the recurring tasks wasn't working correctly so I removed the feature for now. I'll make it optional once I can get it properly fixed.
