## Editing the categories

Posted by Elkiaer - 2007/04/08 20:20

---

As a standard there are alot of categories that I don't need (such as "clients" and "suppliers"), and then there are some categories that I would like to add. I tried to remove the categories under "elements.xml" (in the shadow4 skin) and add new ones. This works fine. But when I want to add a new event and click on the categories button the list is not updated. I can off course write the name of the new categories my self, but it would really be nice if the list was updated. How do I update the categories-list, so it fits with the categories in my skin?

You can change the category list from Options->Advanced->Default categories.
