## How to change font size?

Posted by zzsye - 2007/04/10 04:31

---

Hi all,

In the old version, we can change font size, calendar size and even add space between weekdays. I found the calendar is very small in the new version and when i try to customize it .. there is no way i can modify the font size, calendar size and add space between weekdays in the single calendar view. Please kindly help!

:(

There is some info in the FAQ on how to make the calendar larger.

Thanks for your reply.

I have tried the method in FAQ before .. but when i resize the scale of the calendar to 200, it looks so ugly!

If i want to change the font size of the calendar days and add space between days .. which part of the xml should i amend? Many thanks!

The scaling has been improved in the latest beta so it looks much better now.

Anyway, you cannot change the calendar's font size since it uses images (or well, you can but you need to draw new numbers yourself). To enlarge the calendar window you can change the width (w) and height (h) of the elements in calendar.xml (the manual describes how to edit the skins).
