
Thank you for the Linux Version...

Posted by Raph - 2006/10/29 06:31

Hi, I want to thank you so much ! The only thing I missed on my Ubuntu Breezy since one year (no more Windows XP) was Rainlendar !

I was very impatient that you would finish the Linux Version and I'm very very happy of the result !

I'm just going to announce it on ubuntu-fr and no doubt that a lot of people are going to download it.

Thank you, thank you and thank you again ! :)

Let me second the enthousiasm of Raph; Rainlendar was one of the main software I was missing so much...

Thanks !

+1

Thank you so much.

I really wanted to thank the fact you did a Linux version.

Thanks a lot

FWIW, I keep trying to build up the courage to migrate to Linux, and it's good to know that I can take Rainlendar with me (even for Pro, if I have read the website correctly!).

I also like to thank you for the Linux version. I switched to Ubuntu and have it installed in 4 PCs.

Re: Thank you for the Linux Version... (+ bug?)

Wonderful. An application that workes beautifully in both environments. Using a common interface in XP and Mandriva 2006 is pure bliss. Very impressed - perfect cross platform application.

okh

One issue - that may not be a Rainlendar problem at all - on Kontact compatibility. Kontact does not appear to recognise recurrence added by Rainlendar (however, Rainlendar DOES recognise recurrent events added by Kontact).

This is how 1st of May recurrence would look if added by Kontact:

```
RRULE:FREQ=YEARLY;INTERVAL=1;BYMONTHDAY=1;BYMONTH=5
DTSTART;VALUE=DATE:20000501
DTEND;VALUE=DATE:20000502
```

Whereas this is the same rule when applied by Rainlendar -and NOT understood by Kontact:

```
RRULE:FREQ=YEARLY;INTERVAL=1
DTSTART;VALUE=DATE:20010501
DTEND;VALUE=DATE:20010502
```

This puzzles me, but I don't know the .ics format well enough to pass a judgement of who the culprit is... (As I think Sunbird reads the same recurrence format as Rainlendar, I lean towards blaming Kontact...)

=====
