
Problem(?) on b38

Posted by jeanrmarques - 2007/04/16 16:53

Hi,

I'm having a little problem with the b38 version... Anytime I manually refresh the calendar, it crashes (it just closes), If I start it again everything is working fine again (nothing got corrupted), but that happens everytime I try to refresh it by myself. Also, it froze (one time only, in the last 2 days since I installed the new version) but it was just the app, I had to kill it and start it again.

Im not sure if that would be an issue, But I dont use any local ics file, they are all shared between 3 pcs (7 files), I use icalx to host my calendars.

It does not bother me that much, since I (almost) never refresh it manually, but I thought it would be good for you to know about that.

Thanks,

I cant live without rainlendar anymore. Its a great application! You are the best!

Rainlendar v. 2.1 build 38 isn't a beta version, but a final release. So you can download it on the regular downloadpage of Rainlendar.net:

http://www.rainlendar.net/cms/index.php?option=com_rny_download&Itemid=32

jeanrmarques: I guess you also don't get the Dr.Watson's crash log (C:/Documents and Settings/All Users/Application Data/Microsoft/Dr Watson) since the application just quits? You could send me (rainy@iki.fi) the Rainlendar's debug log from the crash to see if it reveals anything.
